

**Recitation 14 Solutions**  
**October 27, 2011**

2. Example 4.17, page 223 in text. See text for solutions.
3. Let  $X_i$  denote the number of widgets in the  $i^{th}$  box. Then  $T = \sum_{i=1}^N X_i$ .

$$\begin{aligned}\mathbf{E}[T] &= \mathbf{E}\left[\mathbf{E}\left[\sum_{i=1}^N X_i \mid N\right]\right] \\ &= \mathbf{E}\left[\sum_{i=1}^N \mathbf{E}[X_i \mid N]\right] \\ &= \mathbf{E}\left[\sum_{i=1}^N \mathbf{E}[X]\right] \\ &= \mathbf{E}[X] \cdot \mathbf{E}[N] = 100.\end{aligned}$$

and,

$$\begin{aligned}\text{var}(T) &= \mathbf{E}[\text{var}(T \mid N)] + \text{var}(\mathbf{E}[T \mid N]) \\ &= \mathbf{E}\left[\text{var}\left(\sum_{i=1}^N X_i \mid N\right)\right] + \text{var}\left(\mathbf{E}\left[\sum_{i=1}^N X_i \mid N\right]\right) \\ &= \mathbf{E}[N \text{var}(X)] + \text{var}(N \mathbf{E}[X]) \\ &= (\text{var}(X))\mathbf{E}[N] + (\mathbf{E}[X])^2 \text{var}(N) \\ &= 16 \cdot 10 + 100 \cdot 16 = 1760.\end{aligned}$$
