1.9		6
Your Grade		50

- This quiz has 1 problem, worth a total of 50 points.
- You may tear apart pages 3 and 4, as per your convenience, **but you must turn them in together with the rest of the booklet.**
- Write your solutions in this quiz booklet, only solutions in this quiz booklet will be graded. Be neat! You will not get credit if we can't read it.
- You are allowed one two-sided, handwritten, 8.5 by 11 formula sheet. Calculators are not allowed.
- **Unless otherwise specified, you may give an answer in the form of an arithmetic expression (sums, products, ratios, factorials) of numbers that could be evaluated using a calculator.** Expressions like  $\binom{8}{3}$  or  $\sum_{k=0}^5 (1/2)^k$  are also fine.
- You have 50 minutes to complete the quiz.
- Graded quizzes will be returned in recitation on Thursday 10/13.

---

**Problem 0:** (1 point penalty) Write your name, your assigned recitation instructor's name, and assigned TA's name on the cover of the quiz booklet. The Instructor/TA pairing is listed below.

Recitation Instructor	TA	Recitation Times
Patrick Jaillet	Aliaa Atwi	10 & 11 AM
Alan Willsky	Jagdish Ramakrishnan	1 & 2 PM
John Wyatt	Jimmy Li	2 PM & 3 PM

**Summary of Results for Special Random Variables**

**Discrete Uniform over  $[a, b]$ :**

$$p_X(k) = \begin{cases} \frac{1}{b-a+1}, & \text{if } k = a, a+1, \dots, b, \\ 0, & \text{otherwise,} \end{cases}$$

$$\mathbf{E}[X] = \frac{a+b}{2}, \quad \text{var}(X) = \frac{(b-a)(b-a+1)}{12}.$$

**Bernoulli with Parameter  $p$ :** (Describes the success or failure in a single trial.)

$$p_X(k) = \begin{cases} p, & \text{if } k = 1, \\ 1-p, & \text{if } k = 0, \end{cases}$$

$$\mathbf{E}[X] = p, \quad \text{var}(X) = p(1-p).$$

**Binomial with Parameters  $p$  and  $n$ :** (Describes the number of successes in  $n$  independent Bernoulli trials.)

$$p_X(k) = \binom{n}{k} p^k (1-p)^{n-k}, \quad k = 0, 1, \dots, n,$$

$$\mathbf{E}[X] = np, \quad \text{var}(X) = np(1-p).$$

**Geometric with Parameter  $p$ :** (Describes the number of trials until the first success, in a sequence of independent Bernoulli trials.)

$$p_X(k) = (1-p)^{k-1} p, \quad k = 1, 2, \dots,$$

$$\mathbf{E}[X] = \frac{1}{p}, \quad \text{var}(X) = \frac{1-p}{p^2}.$$

**Problem 1: (50 points)**

*Note:* All parts can be done independently. Even so, if worried about carrying over a possible mistake in a previous part, you can use a symbol for the expression you found there, and use that symbol in the formulas for subsequent parts.

*Note:* **Algebraic expressions do not need to be simplified in your answers, unless otherwise noted.**

We start with a collection of  $n$  (distinguishable) individuals.

1. **(4 points)** Let  $k$  be a positive integer, less than  $n$ . In how many ways can these individuals be split into a blue team with  $k$  members and a red team with  $n - k$  members? (*Individuals within each team are not ordered.*)
2. **(4 points)** In how many ways can these individuals be split into a blue, red, and white team? (The team sizes are not fixed; they can be any numbers in the range from 0 to  $n$ , but must add up to  $n$ . *Individuals within each team are not ordered.*)

For the remaining questions, assume that each individual is randomly assigned to exactly one team: a person is assigned to the blue team with probability  $p_B$ , the red team with probability  $p_R$ , and the white team with probability  $p_W$  (where  $p_B, p_R, p_W > 0$  and  $p_B + p_R + p_W = 1$ ); this is done independently for each person. Let  $N_B, N_R, N_W$  be the numbers of people in the respective teams.

3. **(6 points)** Suppose that  $n = 5$ . We are told that persons 1 and 2 belong to the blue team.
  - (i) **(3 points)** Find the conditional PMF of  $N_B$ , conditioned on this information.
  - (ii) **(3 points)** Are  $N_B$  and  $N_R$  independent, conditioned on this information? (*Give a 1-2 line justification.*)
4. **(5 points)** Write down the PMF and mean of  $N_B + N_R$ .
5. **(6 points)** Find  $\mathbf{E}[N_B^2]$ . (Your formula should be a simple closed form expression, as opposed to something of the form  $\sum \dots$ ).
6. **(6 points)** Let  $k$  be a given positive integer, less than  $n$ . Find the conditional PMF of  $N_B$  given that  $N_B + N_R = k$ . *Hint:* No algebra; think.
7. **(6 points)** Each person in the red team receives a random bonus of either \$1 or \$2. Either bonus value is equally likely, and the bonuses of different persons are independent. Let  $Z$  be the total amount of bonuses given to the red team. Write down the joint PMF of  $N_R$  and  $Z$ . (Make sure to specify the range of values where your formula applies.)
8. **(7 points)** Person  $i$  (for  $i = 2, \dots, n - 1$ ) is happy if and only if persons  $i - 1$ ,  $i$ , and  $i + 1$  belong to the same team. Find the expected number of happy people. (*Persons 1 and  $n$  are never happy.*)
9. **(6 points)** Find the conditional probability that person 3 is happy, given that person 2 is happy.

Each question is repeated in the following pages. Please write your answer on the appropriate page.
